

Improving productivity. Providing insight.

Checkit provides Real-Time Operations Management for organisations that need to ensure safe, reliable and efficient performance.

For **frontline staff**: paperless tools to work efficiently and consistently.

For **supervisors**: confidence work is getting allocated and done, instance notification of issues to address.

For **managers**: instant visibility of performance.

Top-to-bottom visibility of your business.

Get smart, go paperless

Operational challenges

For businesses employing staff in areas including catering, cleaning, health & safety, and customer service, these are challenging times.

Success requires managing to:

Driving up productivity...

...while ensuring process and policy compliance...

...and managing at scale across sites and teams.

Operational blind spot

Today, businesses rely on digital systems for important functions like bookings, payroll or book-keeping. But when it comes to guiding the actual work people do, and the status of their equipment, most still rely on pen and paper!

This creates a gaping blind spot:

- Staff waste time on paperwork and manual checks instead of their “real” work.
- Process adherence and compliance is patchy, with the records unreliable.
- Management information is locked away in paper files on branch office shelves.

Imagine the impact of a food poisoning outbreak on a restaurant, hotel or busy educational establishment.

Picture a high street brand whose employees are too busy with mundane tasks to truly deliver for customers.

Checkit Real-Time Operations Management makes these scenarios avoidable.

Checkit Real-Time Operations Management incorporates **Work Management** and **Automated Monitoring** – continually capturing data points on your organisation’s performance, while **Operational Insight** turns that data into intelligent, useful information.

Work Management – With Checkit, your staff carry out the right tasks, the right way, without fail. Schedule tasks through a cloud-based system that guides your staff through their daily work, boosting quality of service while reducing risk and training costs.

Automated Monitoring – Checkit’s smart sensors provide continuous real-time monitoring and recording of multiple conditions including temperature, humidity, and equipment status from a single cloud system.

Operational Insight – As the person responsible for overall performance, it can be hard to spot the essential details. Is work being done on time? Is equipment operating as it should be? Now, performance can be tracked by site, team, and process, creating the visibility you need to track records and make sure you can intervene before dips in performance turn into major issues.

Checkit is delivered as a service that gets you going fast and grows as you need. There is no complex IT to worry about and our customer service team is on hand to give you great support.

Digitising operations management improves business performance

Drive revenue

- Consistently deliver a great service experience.
- Free up time to focus on customers.

Improve productivity

- Automate and streamline routine work.
- Improve management efficiency.

Eliminate risk

- Improve compliance.
- Spot and solve problems early.

Checkit saves about an hour of staff time each day, just by not having to write everything down.

Dominic Teague, Executive Chef, One Aldwych

Basically, Checkit can work in any area where the process requires time-sensitive checks to be recorded, **it's a no-brainer really.**

Dave Morton, Catering Operations Manager, University of Winchester

Automatically scheduling work for team members **makes our teams much more efficient**, safeguarding our reputation for food safety & good practice.

Gary Dougan, Head Chef, Robinson College, Cambridge
