

## Checkit Real-Time Operations Management ensures the right people, do the right thing, in the right place, at the right time.

For **frontline staff**, Checkit automates and guides their activities improving efficiency and consistency.

For **supervisors**, it automatically allocates and schedules work, making exceptions and issues easy to handle.

For **managers**, it creates broad control and consistency, providing continual insights across the business.

## Platform modules

### Work Management

#### Transform frontline work with mobile task-based apps

Define and manage both scheduled and one-off activities to drive up compliance, efficiency and quality

Build and manage smart apps that guide and enforce user workflows and checks. Manage exceptions and create time-stamped audit trails. Build without coding and deploy to one user or thousands.

### Automated Monitoring

#### Eliminate manual checks

Automate, schedule and monitor your routine tasks and processes

Wireless sensors keep watch over important assets and equipment, 24\*7. Alerts and reports allow supervisors and managers to respond and take immediate action.

### Operational Insight

#### Manage with data

Gain unprecedented insights into performance to identify problems early and drive up quality

Checkit Operational Insights combines millions of data points from frontline activities and measurements to create a detailed view of work, team and site performance over time.

Available for use with Work Management and/or Automated Monitoring.

### Benefits

- Efficient, accurate work management and records for consistent, high standards
- Replace manual checks with 24\*7 automated monitoring
- Save staff time, minimise wastage and financial loss
- Real-time visibility across, teams, sites and functions
- See how people, processes and equipment are performing against operational strategy
- Early warnings to identify issues, trends and equipment failures quickly
- Allows intervention before small issues turn into major issues

Your operations as you've never seen them before – from a top level KPI overview to drill down analysis dashboards.
